

Planetsim GPRS internet connection setup for Personal Computers (3G Modems - Mac OS - Apple)

Bellow you can read the instructions for setup your Mac OS Laptop or Personal Computer for use PlanetSim Data with USB Modem 3G.

- Plug in your Huawei modem. It goes in the USB port.
- Open System Preferences and go to 'Network'.
- Your Huawei modem should be listed in the pane on the left of the window. If it isn't, click on the + and select your modem from the 'Interface' drop down menu. Then click on 'Create'.
- Highlight the Huawei modem in the panel on the left and select 'Advanced'.

- Change vendor to 'Generic'. In the drop down menu, select 'generic' as the vendor and set 'Model' to 'GPRS (GSM/3G)'. Now 'APN' will appear and you can fill it with information bellow.

For PlanetSim Classic

- Access Point Name (APN): send.ee
- User name: enter your PlanetSim number, e.g. 3721231234
- Password: leave the field blank

For PlanetSim Data

- Access Point Name (APN): apn
- User name: leave the field blank
- Password: leave the field blank

Telephone number for both : *99#

- After entering your APN (and other network settings should they be required) and set telephone number (*99#) and credentials. Click on 'Apply' and click on OK.

Click **Apply** and then click the **Connect** button back on the Network Preferences window, and you should be able to connect.
